INSTITUT d'OPTIQUE GRADUATE SCHOOL | Continuing Education
Formation Continue

SC9 | Design of optical imaging systems

NIVEAU : ADVANCED
Publics : Engineer, project manager in R&D
Prérequis : Basic knowledge in geometrical optics
Responsable(s) pédagogique(s) : Eric Ruch - Ingénieur expert à REOSC
Langue de la formation : French
Capacité maximum : 12
Prix : 2560€ HT - **Durée :** 2 x 3 days - 42 h

Objectifs

- Understand the conventional optical system combinations and their applications
- Specify or size an optical system, write a specification
- Evaluate the performance of an optical system and optimize it.

et 03 april 2019 au 05 april 2019

Thèmes abordés

Basis on optical systems
- Photometry and radiometry

Analysis of an optical system
- Limit of resolution of optical systems

Classical optical combinations
- Dioptric and catadioptric systems, zoom, optical IR

SC9 | Design of optical imaging systems

Le programme

Instrumental optics reminder
- Geometric characteristics of optical systems
- Magnification - Aperture - Resolution - Field of view - Depth of field
- Reminder about aberrations

Photometry
- Reminder on photometric quantities: flux, illumination, intensity, luminance, geometric extended
- Photometry instruments
- Reminder about cameras and matrix detectors

Analysis of an optical system
- Criteria qualities of an optical imaging system : defects of the wavefront, PSF, MTF
- Measurement methods of these criteria: star test, wavefront analyzers
- Basic principles in adaptive optics

Study conventional optical combinations
- Diopter systems: from simple lens objectives to high quality photographic objectives
- Catadioptric systems: telescope mirrors 2 or 3, on- and off-axis
- Lenses with variable focal (zoom)
- Optical systems for thermal infrared

Labwork
- Aberration measurements (star test)
- wavefront analysis (Zygo, Haso)
- FTM measurements (LSF, Foucault method)

Méthodologie et évaluation

Lectures and exercices
Demonstrations in the lab
Labworks on instruments
